ANTONIO BOWDEN

Senior Network & Security Engineer

Orlando, FL | linkedin.com/in/antonio-bowden | github.com/abowden101 | abowden101.github.io/antonio-bowden-portfolio

SUMMARY

Network and security engineer with 5+ years in healthcare and multi-site environments, including HIPAA-regulated clients. I build and secure Cisco and Fortinet networks, manage Azure AD and Microsoft 365 access, and handle incident response and vulnerability remediation for an MSP serving healthcare-adjacent clients. Currently completing CCNA and Security+ alongside a B.S. in Cloud and Network Engineering.

SKILLS

Networking: Cisco routers and switches, LAN/WAN/VLAN design, network segmentation, OSPF, BGP, VPN/IPsec, DHCP, DNS, Ubiquiti UniFi wireless

Security: Fortinet and Palo Alto firewalls, firewall policy standardization, access control, incident response, vulnerability remediation, HIPAA, SOC 2, ITIL

Identity & Cloud: Azure Active Directory, Hybrid AD, Active Directory, Microsoft 365

Systems: Windows Server, Windows 10/11, VMware ESXi, Microsoft Hyper-V, VoIP/PBX

Automation & Tools: PowerShell, Bash, ServiceNow, ConnectWise

EXPERIENCE

Senior Network & Security Engineer | Advantage Technologies

February 2022 – Present

- Design, deploy, and support Cisco LAN/WAN/VLAN infrastructure across multi-site client environments, keeping distributed healthcare operations connected and stable.
- Standardized Fortinet firewall, VPN, wireless, and segmentation policies across multi-site healthcare clients, tightening access between zones and supporting HIPAA-aligned compliance.
- Led server and clinical data migrations, including imaging and CBCT/Vatech data, to redundant host systems with no disruption to practice operations.
- Administer Azure AD, Hybrid AD, and Microsoft 365, covering identity management, access control, and security policy enforcement, so only the right people reach the right systems.

- Lead incident response, vulnerability remediation, and root cause analysis for network, infrastructure, and cloud security issues, closing the gap that caused the incident rather than just clearing the ticket.
- Automate onboarding, monitoring, reporting, and backups with PowerShell to make recurring tasks consistent and reduce manual errors.
- Manage VMware ESXi and Hyper-V environments, including VM deployment, lifecycle maintenance, and performance tuning.
- Carry out rack-and-stack, structured cabling, patch panel consolidation, and MDF/IDF buildouts for infrastructure refreshes, so new sites come up clean and documented.
- Support VoIP/PBX and unified communications, resolving voice connectivity issues so clinical and office staff stay reachable.
- Write network documentation, diagrams, and SOPs, and mentor junior technicians, so the next engineer is not starting from scratch.

Independent Contractor | Field Nation and WorkMarket

January 2026 – Present

- Complete evening and weekend field work across the Orlando metro: access point installs and swaps, rack work, and low-voltage cabling for retail, office, and clinic sites.
- Close out every job the same day with testing, photos, and results.
- Handle POS, printer, and desktop refreshes, including after-hours retail cutovers.

Field Technician | AdventHealth

September 2021 – December 2021

- Supported network devices and clinical technology across hospital and outpatient facilities.
- Performed Layer 1–3 diagnostics, cable tracing, switchport verification, and connectivity testing for clinical endpoints.
- Assisted network and systems engineers with infrastructure refreshes, switch deployments, and VLAN validation.
- Provisioned endpoints, joined devices to Windows domains, supported VPN access, and administered user accounts while maintaining HIPAA compliance.

Field Technician | Orlando Health

February 2021 – August 2021

- Provided Level II support for workstations, network infrastructure, telecommunications, and clinical systems.
- Executed Epic Technical Dress Rehearsal (TDR) test scripts to validate workflows and end-user readiness before go-live.
- Performed switchport validation, patch panel terminations, cable tracing, and hardware installs for hospital-wide rollouts.
- Documented issues and remediation steps under ITIL practices.

EDUCATION

B.S. Cloud and Network Engineering (Azure Track) | Western Governors University
Started February 2025 | Expected 2027

CERTIFICATIONS

- Cisco Certified Network Associate (CCNA) – In progress, target December 2026
- CompTIA Security+ – In progress
- Google IT Support Professional Certificate
