ANTONIO BOWDEN

Senior Network & Security Engineer

Orlando, FL | linkedin.com/in/antonio-bowden | github.com/abowden101 | abowden101.github.io/antonio-bowden-portfolio

PROFESSIONAL SUMMARY

Senior Network & Security Engineer with 5+ years of progressive experience owning enterprise infrastructure across healthcare and multi-site environments. Proven track record leading multi-site infrastructure modernization and clinical data migrations, engineering standardized firewall and VLAN security policies across distributed healthcare operations, and driving Cisco routing and switching, Fortinet firewall, and cloud identity initiatives in HIPAA-regulated settings. Recognized for translating complex networking and security requirements into reliable, secure, and well-documented infrastructure, while mentoring junior technical staff and partnering cross-functionally to keep critical operations running without interruption.

CORE COMPETENCIES

Enterprise Network Architecture & Ownership | Multi-Site Infrastructure Modernization | Cisco Routing & Switching | LAN/WAN/VLAN Design | Network Segmentation & Security | OSPF | BGP | STP | TCP/IP | DHCP | DNS | VPN/IPsec | Fortinet Firewalls | Palo Alto Firewalls | Ubiquiti UniFi Wireless | VoIP/PBX | Clinical & Data Migrations | Azure Active Directory & Hybrid AD | Microsoft 365 | VMware ESXi | Microsoft Hyper-V | PowerShell Automation | HIPAA / SOC 2 / ITIL Compliance | Incident Response & Root Cause Analysis | Mentorship & Documentation

PROFESSIONAL EXPERIENCE

Senior Network & Security Engineer | Advantage Technologies

February 2022 – Present

- Engineered, deployed, and supported Cisco-based LAN/WAN/VLAN infrastructure across multi-site client environments, maintaining reliable connectivity across distributed operations.
- Led end-to-end server and clinical data migration initiatives — including imaging systems and CBCT/Vatech data — to modernized, redundant host systems with zero disruption to practice operations.
- Engineered and standardized Fortinet firewall, VPN, wireless, and network segmentation policies across multi-site healthcare operations, strengthening security posture and sustaining HIPAA-aligned compliance.
- Directed rack-and-stack deployments, structured cabling, patch panel

consolidation, and MDF/IDF buildouts supporting infrastructure refreshes and hardware lifecycle management.
- Administered Azure Active Directory, Hybrid AD, and Microsoft 365 environments, governing identity management, access control, and security policy enforcement across the client base.
- Owned VMware ESXi and Microsoft Hyper-V environments end-to-end, including virtual machine deployment, lifecycle maintenance, and performance optimization.
- Provisioned and supported VoIP/PBX and unified communications infrastructure, resolving voice connectivity and integration issues to maintain business continuity.
- Developed PowerShell automation for administrative workflows, monitoring, reporting, user onboarding, and backup operations, improving consistency across recurring infrastructure tasks.
- Led incident response, vulnerability remediation, and root cause analysis for complex networking, infrastructure, and cloud security issues.
- Produced network documentation, infrastructure diagrams, and standard operating procedures while mentoring junior technical staff on enterprise networking practices.

Independent Contractor | Field Nation and WorkMarket

January 2026 – Present

- Evening and weekend field engineering across the Orlando metro — network installs and refreshes for retail, office, and clinic sites.
- Access point installs and swaps, rack work, and low-voltage cabling, run to a closeout standard: arrive early, test before leaving, close out with photos and results the same day.
- POS, printer, and desktop refresh work, including after-hours retail cutovers.

Field Technician | AdventHealth

September 2021 – December 2021

- Supported enterprise healthcare infrastructure, clinical technology, and network devices across hospital and outpatient facilities serving critical patient-care operations.
- Performed Layer 1–3 network diagnostics, cable tracing, switchport configuration verification, and connectivity testing to sustain uptime for clinical endpoints.
- Partnered with network and systems engineers on infrastructure refreshes, switch deployments, and VLAN validation initiatives across the hospital network.
- Provisioned endpoints, integrated devices with Windows domains, supported VPN access, and administered user accounts in Windows Server environments.
- Delivered Level II technical support to clinical personnel while maintaining

HIPAA compliance throughout technical resolutions.

Field Technician | Orlando Health

February 2021 – August 2021

- Provided Level II technical support for workstations, network infrastructure, telecommunications, and clinical systems across hospital departments.
- Led Epic Technical Dress Rehearsal (TDR) validation activities, executing test scripts to confirm system workflows and end-user readiness ahead of go-live.
- Performed switchport validation, patch panel terminations, cable tracing, and hardware installation supporting hospital-wide technology rollouts.
- Documented system issues, test results, and remediation steps in accordance with ITIL service management practices.

TECHNICAL PROJECTS

Multi-Site Infrastructure & Data Migration: Engineered network segmentation and led server and clinical data migrations, including dental imaging repositories, to modernized and redundant host systems with zero operational downtime.

Healthcare Technology Go-Live Readiness: Executed Epic TDR validation scripts across hospital departments and partnered with project managers to resolve infrastructure and endpoint defects ahead of go-live.

MDF/IDF Buildout & Cabling Modernization: Directed rack-and-stack installations, patch panel consolidation, structured cabling, and infrastructure deployments for multi-tenant clinical office rollouts.

TECHNICAL SKILLS

Network Infrastructure: Cisco switches and routers, Fortinet firewalls, Palo Alto firewalls, Ubiquiti UniFi access points, UPS systems, patch panels

Operating Systems & Virtualization: Windows Server, Windows 10/11, VMware ESXi, Microsoft Hyper-V

Networking & Protocols: VLAN, STP, OSPF, BGP, IPsec, TCP/IP, DHCP, DNS, VPN

Cloud & Directory Services: Azure Active Directory, Hybrid Active Directory, Microsoft 365, Active Directory

Scripting & Service Tools: PowerShell, Bash, ServiceNow, ConnectWise

Compliance & Frameworks: HIPAA, SOC 2, ITIL

EDUCATION

B.S. Cloud and Network Engineering (Azure Track) — Western Governors University, started February 2025, expected 2027, in progress

CERTIFICATIONS

- Google IT Support Professional Certificate
- Cisco Certified Network Associate (CCNA) — In Progress, target December 2026
- CompTIA Security+ — In Progress
